

Not all "Expert Faculty" are the same.

Ultrasound Courses

Emergency Ultrasound

ICU Ultrasound

Pediatric EM Ultrasound

US Guided Access

Emergency Ultrasound Consultants (EUC) trains physicians, hospitals, and other clinically-based healthcare professionals in point-of-care ultrasound. We show you how to safely incorporate ultrasound into patient care and to reduce risk with this technology using our proven educational products and services.

Exceeding National Guidelines

Our ultrasound courses not only meet, but exceed national ultrasound guidelines such as those set by the American College of Emergency Physicians (ACEP) and the Society for Critical Care Medicine (SCCM). How can we be certain? Simple, our faculty are the authors and co-authors on nearly every guideline for point-of-care ultrasound. As pioneers in emergency ultrasound since 1998, we have developed, published and perfected every application we offer. All courses are provided PRA AMA Category 1 CME.

How do we at EUC define Expert Faculty?

All EUC Faculty are:

- Residency trained in emergency medicine
- Board certified in Emergency Medicine (ABEM/AOBEM)
- Fellowship trained
- Several faculty are boarded in Internal Medicine, Pediatric EM, and Critical Care
- Providing a combined EUS oversight for over 1,500,000 ED patient visits per year
- Directly supervise over 100,000 point-of-care ultrasounds annually
- EUC faculty receive cutting edge, continuous internal EUS training

Focused Training

Our courses are straightforward, focused and provide the critical high-yield "do's and don'ts" that our busy customers, like you, need to succeed. Learn critical pearls, avoid pitfalls, and view real world videos of clinical ultrasound cases. Your group will benefit from our collective experience through our 1-day or 2-day course formats.

We Guarantee the EUC Difference

With over 25 board certified, fellowship-trained faculty your course will be provided by clinical ultrasound experts, and only experts. We guarantee it! We won't send sonographers, medical students, residents or even fellows-in-training to provide your education. Your training, hospital and your patients deserve the very best, that's why all EUC courses and educational products are developed and provided by our unique expert faculty. We work clinically and use ultrasound in our daily practice, let us show you how.
