

# Quality Assurance

**“Quality assurance is an important, yet often overlooked, component of an effective ultrasound program.”**

**The Virtual Ultrasound Director™ (VUD) is designed for your success.**

The VUD program was developed exclusively by experts at EUC. It incorporates a patent-pending triad of three critical quality assurance processes in clinical ultrasound. The VUD assists clients in accelerating physician training, competence and credentialing in point-of-care ultrasound. If you want to close the education and performance gap, if you want to accelerate credentialing process in emergency ultrasound, VUD is the answer!

Emergency physicians are risk averse! That's likely a key reason you decided to make the investment in using point-of-care ultrasound. That reason is risk reduction during procedures and proper image acquisition. So how do you close the gap between novice user and trained, credentialed physician in clinical ultrasound? At Emergency Ultrasound Consultants (EUC), we offer a structured and professional quality assurance program.

**The Virtual Ultrasound Director provides three critical QA components for emergency ultrasound success:**

- **Image Peer Review:** Rapid electronic image “peer review” using our partner UltraLinq
- **Live Webinars:** Monthly “live webinars” hosted by your virtual director using Acrobat Connect Pro
- **Mentoring:** Monthly mentoring of your onsite director/coordinator. Essentially a virtual fellowship

**Other benefits include:**

- The support of fellowship trained experts to aid in any political issues
- Decrease the time for physicians to become credentialed in ultrasound
- Classifying each study as meeting ACEP and SCCM Ultrasound Criteria
- Clients actively interact/participate during live monthly VUD Webinars
- Review system knobology, and ultrasound protocols during VUD Webinars
- EUC will develop a “pathology library” from your cases for future review

# Quality Assurance

**70% of all ERs in California lack an ED US Quality Assurance Program. A critical component for safe, quality care and US credentialing.**

We have compiled a series of innovative techniques used to train ultrasound fellows from the most competitive fellowship programs to provide to you and your faculty through the VUD. We will pair you with two EUC faculty who will serve as your virtual ultrasound directors. A curriculum is designed based on your goals to assist your faculty with focus on specific applications. Actual images that you or your fellow doctors have performed are reviewed in our live monthly webinars. These webinars are also recorded and available for others in your group to review at their convenience.

## **Listen to what our customers and other experts say...**

*“Through the EUS Consultants Virtual Ultrasound Director Program our staff has access to top of the line ongoing training from experts in emergency ultrasound.”*

*“Our scans are peer reviewed quickly with useful feedback, reinforcing the introductory learning, and giving our new program hospital wide credibility.”*

*“They conduct excellent, very accessible monthly Webinars allowing our physicians to get much needed ongoing education from the comfort of their homes.”*
